

STL Service Centers

TFT STLs may now be serviced at two factory authorized service centers in addition to the TFT factory. TFT has trained both Fuller Electronics and J Squared in the operation and repair of all of our STL transmitters and receivers. Both can offer repairs and parts for normal as well as emergency situations.

Customers who wish to use these centers may contact them directly:

Ted Fuller
Fuller Electronics
501 Heilig Avenue
Salisbury, North Carolina 28144
704-633-1009 (voice)
704-642-0056 (fax)

Jim Jones
J Squared
2198 Hubbard Lane
Grants Pass, Oregon 97527
541-471-2262 (voice)
541-471-3007 (fax)

Fuller Electronics and J Squared have received complete training on our STL products, have ample components for their repair, and sufficient test equipment to insure complete, thorough repairs. They are also strategically located, Fuller on the East Coast and J Squared in the Northwest. Now three facilities are available to meet customer needs.

Of course, TFT still has emergency service available in Santa Clara 365 days each year. The same TFT staff who designed and repair TFT STLs has trained Fuller Electronics and J Squared on all phases of TFT composite and mono STL systems.

We trust this new service will allow our customers to buy TFT products with complete assurance and economy after the sale as well as guarantee strong support for those who have already placed their trust in TFT.

A handwritten signature in black ink, appearing to read 'Darryl E. Parker', with a stylized flourish at the end.
